Re: Davis B D & Mingioli E S. Mutants of Eschericia coli
requiring methionine or vitamin B12. J. Bacteriol. 60:17-28,
1950.

Dear Dr. Davis:

In reviewing our records we found that the above paper has been very highly cited. On behalf of Dr. Eugene Garfield, president of ISI®, I would like to invite you to prepare a Citation Classic® commentary on this article, for publication in Current Contents®.

If you are familiar with Current Contents, you know that the idea of a Citation Classic commentary is to describe the personal side of your research, insights gained in the course of your work, and why you think your publication is so frequently cited. The commentary will enable you to share with colleagues those details that rarely appear in formal publications.

The enclosed Author's Guide and sample Classics explain the feature and describe the procedure for preparing your commentary. Please note that we try to limit these commentaries to a single published page. We also request that you give complete bibliographic information in all your references, including, if possible, titles, all authors, and first and last page numbers of journal articles and book chapters. References to books should also include editors, if any, publishers, publishers' locations, total number of pages, and, for conference proceedings, dates and locations of conferences. Complete references will significantly expedite the publication of your Classic. Finally, if it's not too much trouble, we would like a complete copy of your article.

Please direct all correspondence or questions to me.

Congratulations on your success with this publication.

Sincerely,

Eric Thurnschwell
